

**AMENDMENTS TO THE SPECIFICATION**

**Please replace the paragraph no. [0096] with the following amended paragraph:**

In the case of arranging an electrode on the substrate, i.e. in the case that the image display device is formed as a module, the particles or the liquid powders charged in a predetermined characteristic and having a color is pulled in or rebounds with respect to the substrate by means of an electric field generated on respective electrodes formed on the substrate by applying an outer voltage thereto. Then, the particles or the liquid powders ~~aligned in accordance with the electrostatic latent image~~ aligned in accordance with the electrode potential is observed from outside of the display device through the transparent substrate.
